

Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Texas

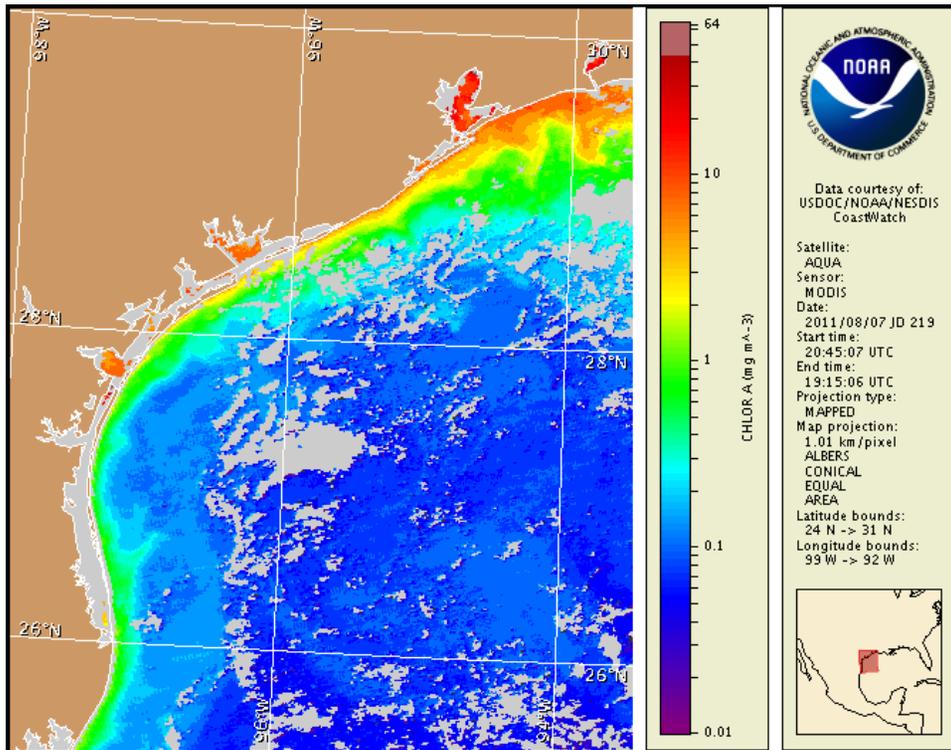

Monday, 08 August 2011

NOAA Ocean Service

NOAA Satellite and Information Service

NOAA National Weather Service

Last bulletin: Monday, August 1, 2011

Satellite chlorophyll image with possible HAB areas shown by red polygon(s). Cell concentration sampling data from July 31 to August 4 shown as red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

Conditions Report

There is currently no indication of a harmful algal bloom at the coast in Texas. No impacts are expected alongshore Texas today through Sunday, August 14.

Analysis

There is currently no indication of a harmful algal bloom along the coast of Texas. In recent imagery (MODIS, 8/7; shown at left), patches of elevated to high chlorophyll (2-11 $\mu\text{g/L}$) are visible along- and offshore from Sabine Pass to the Port Aransas region. Elevated chlorophyll present at the coast is likely due to the resuspension of benthic chlorophyll and sediments and not related to a harmful algal bloom. Forecast models indicate a maximum transport of 40 km north along the coast from Port Aransas from August 7 to 11.

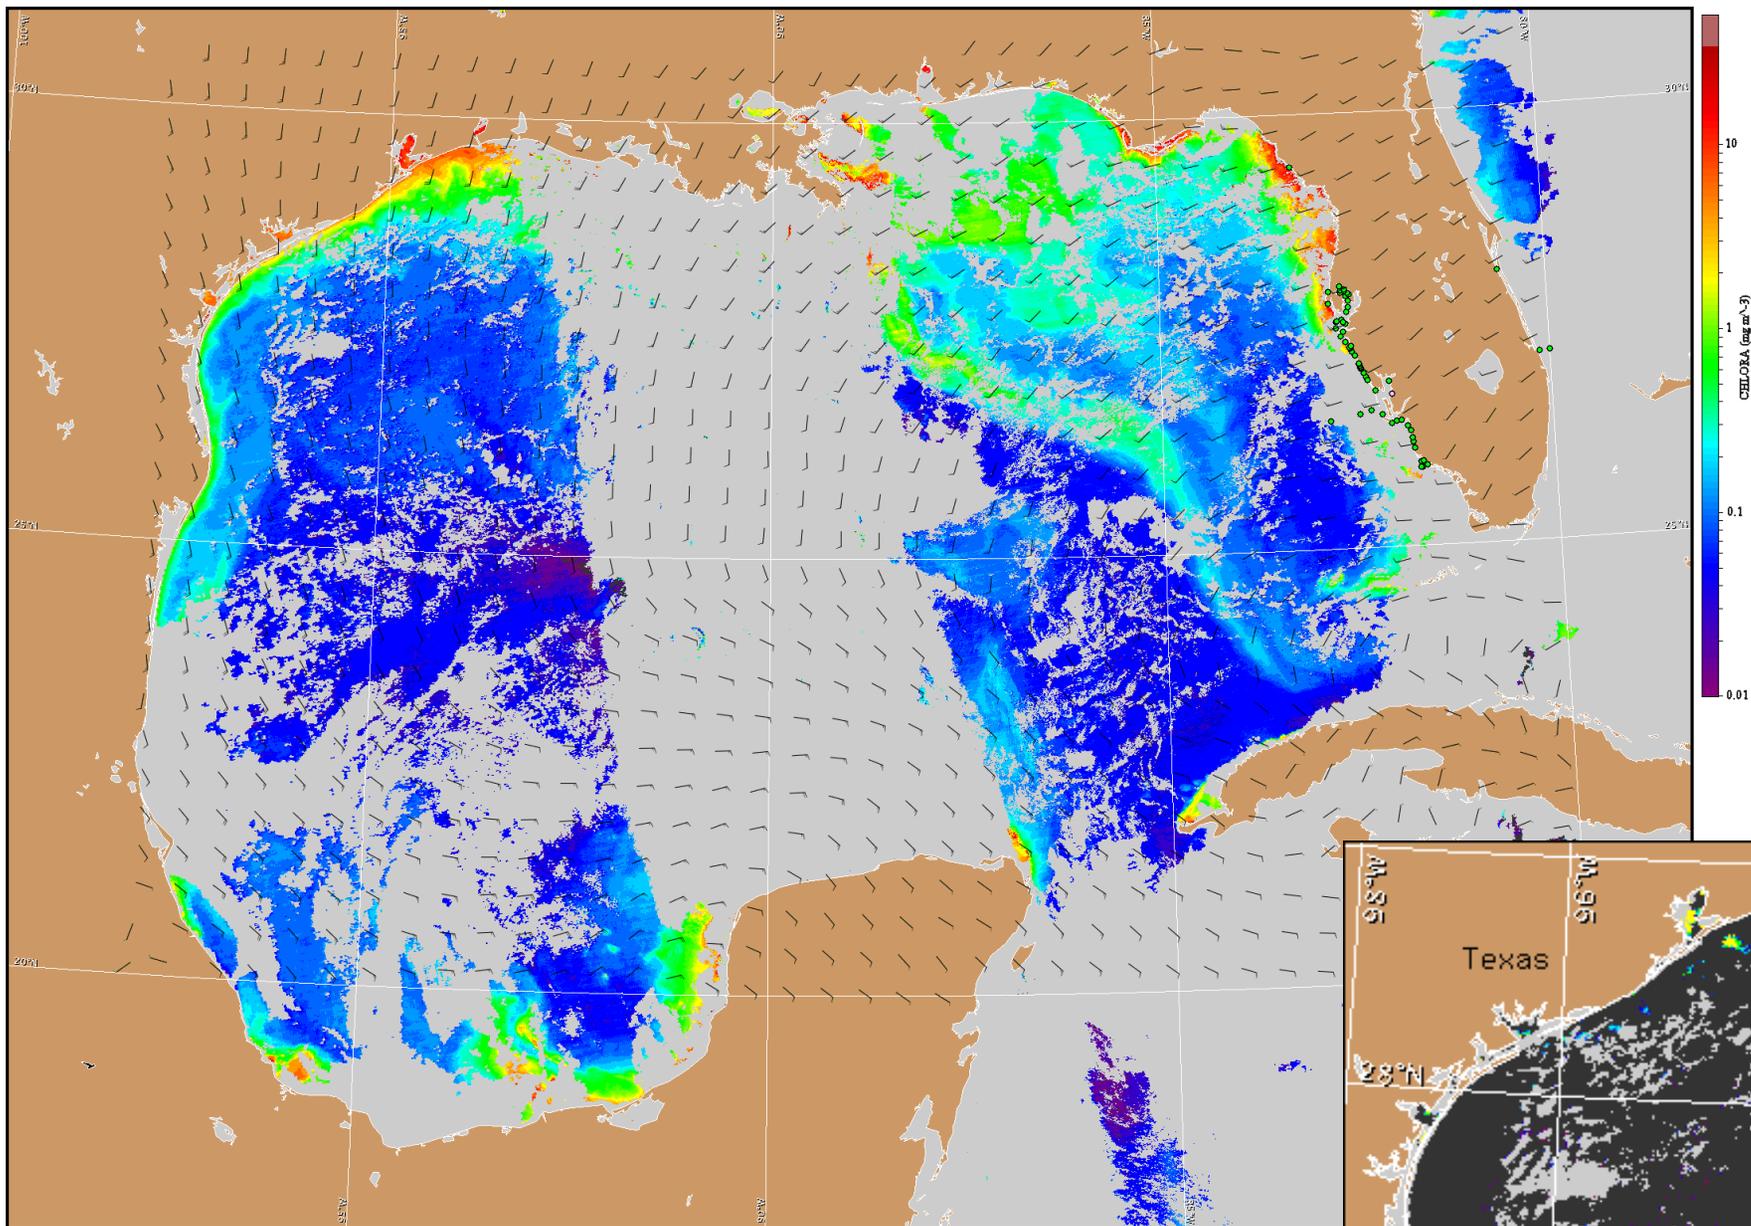

Kavanaugh, Derner

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

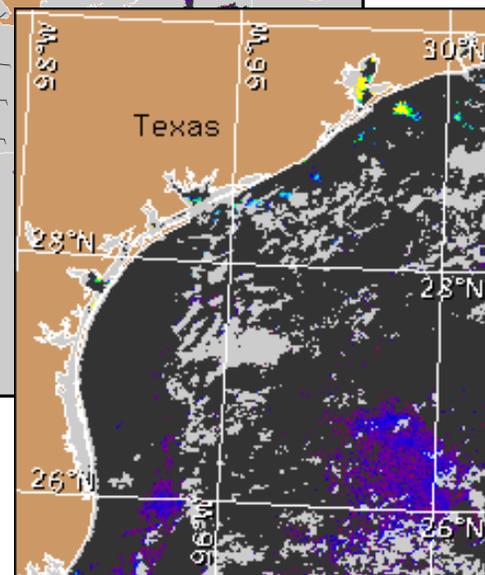

Wind Analysis

Port Aransas: South winds (10-20 kn, 5-10 m/s) today through Tuesday evening. Southeast winds (10-20 kn) Wednesday through Friday.

Satellite chlorophyll image and forecast winds for August 9, 2011 06Z with cell concentration sampling data from July 31 to August 4 shown as red (high), orange (medium), yellow (low b), brown (low a), blue(very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
