Conditions Report
There are no reports of harmful algae at this time. No impacts are expected.

Analysis
There is no indication of a toxic K. brevis bloom along the Texas coast at this time. Imagery indicates a very large high chlorophyll feature along the entire Texas coast. This most likely is a continued bloom of non-toxic phytoplankton as a result of elevated nutrients.

-Tomlinson, Jewett

Wind conditions from Port Aransas, TX

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis
Southeasterly wind (10-15 knots) expected to shift southerly by Wednesday and increase to 15-20 knots by Wed night. South-Southeasterly winds through Thursday are expected to shift to strong (15-20 knots) north-northeasterlies by Friday.
Satellite chlorophyll image and forecast winds for November 5, 2008 12Z with Cell concentration sampling data from October 27 to 30 shown as red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HABFS bulletin guide:
http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
