Conditions Report

A harmful algal bloom continues along South Padre Island and in the Corpus Christi area. Patchy very low impacts are expected in both areas through the week.

Analysis

Due to cloudy weather in the Gulf, no satellite imagery has been available since last week. Fish kills continue to be reported in the Corpus Christi Bay area. Low concentration of Karenia cells continue to be reported in both South Padre Island and Corpus Christi Bay. Low concentrations of cells were reported at Port Aransas. The strong north winds will favor south and westward movement of blooms.

Wynne, Tomlinson

Wind conditions from Port Aransas, TX

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

Wind Analysis

Please note the following restrictions on all SeaWiFS imagery derived from CoastWatch.

1. Data are restricted to civil marine applications only; i.e. federal, state, and local government use/distribution is permitted.

2. Image products may be published in newspapers. Any other publishing arrangements must receive GeoEye approval via the CoastWatch Program.
