Conditions Report
A harmful algal bloom continues offshore in the gulfside region of the lower Florida Keys and was last identified on 2/8 offshore in the gulfside region of the middle Florida Keys. Patchy low impacts are possible today through Sunday in the gulfside region of the lower and middle Florida Keys. No impacts are expected elsewhere alongshore southwest Florida today through Sunday, February 28.

Analysis

SW Florida: No *Karenia brevis* has been identified alongshore southwest Florida from Pinellas to Collier County, or offshore southern Collier County (15nm northwest of Marco Island and 3.4nm southwest of Cape Romano) in the past week (FWRI, 2/18-2/24). No new sample information is available in northern Monroe County where a 'very low b' *K. brevis* concentration was last identified southwest of Pavillon Key on 2/9 (FWRI). No reports of impacts due to harmful algal blooms have been received this week (MML,FWRI,CCPCPD). Recent satellite imagery is predominantly obscured by clouds throughout the southwest Florida region, limiting analysis. No elevated chlorophyll features are visible in recent MODIS imagery nearshore or offshore northern to central Collier County.

Florida Keys: A patchy harmful algal bloom continues offshore in the gulfside region of the lower Florida Keys (up to 'low a'; MML, 2/15). No new sample information is available north of the middle Florida Keys where 'very low a' to 'very low b' *K. brevis* concentrations were last identified on 2/8 (MML). Recent satellite imagery is obscured by clouds throughout the Florida Keys region. Continued sampling is recommended. Strong northwest to north winds today through Sunday will increase the potential for southward transport of the bloom north of the Keys.

Due to technical difficulties SeaWiFS imagery is currently unavailable for display. MODIS imagery is shown on this bulletin.

-Fisher, Lindley
Wind conditions from Vaca Key, FL

Wind conditions from Venice Pier, FL

Wind conditions from Naples, FL

Wind conditions from Sand Key, FL

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis

Southwest Florida: Northwest winds today through tonight (15-20kn, 8-10m/s). North to northeast winds Friday (10kn,5m/s). North winds Saturday (15kn, 8m/s). Northwest to north winds on Sunday (15kn).

Florida Keys (gulfside): Northwest to north winds today (25-35kn, 13-18m/s) and tonight (15-20kn,8-10m/s). North to northeast winds Friday (15-20kn), shifting east to southeast Friday night (5-10kn, 3-5m/s). Southwest winds Saturday (15-25kn, 8-13m/s). Northwest to north winds Sunday (10-15kn, 5-8m/s).
