Conditions Report
There is currently no indication of a harmful algal bloom at the coast in Texas. No impacts are expected alongshore Texas today through Sunday, August 21.

Analysis
There is currently no indication of a harmful algal bloom along the coast of Texas. Recent imagery is partially obscured by clouds from Sabine Pass to the northern end of the Matagorda Peninsula, limiting analysis. Slightly elevated chlorophyll (1-4 µg/L) is visible along- and offshore from Pass Cavallo to Port Aransas Pass. Elevated chlorophyll present at the coast is likely due to the resuspension of benthic chlorophyll and sediments and not related to a harmful algal bloom. Forecast models indicate a maximum transport of 70km north along the coast from Port Aransas from August 14-18.

Derner, Kavanaugh

Wind Analysis
**Port Aransas**: Variable south to southeast winds (5-15kn, 3-8m/s) today and Tuesday. Southeast winds (5-15kn) Wednesday and Thursday, shifting south (5-15kn) Thursday. South winds (5-15kn) Friday.
Satellite chlorophyll image and forecast winds for August 16, 2011 06Z with cell concentration sampling data from August 5 to 11 shown as red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:
http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
