Conditions Report

There is currently no indication of *Karenia brevis* (commonly known as Texas red tide) along the coast of Texas. No respiratory irritation is expected Monday, July 7 through Monday, July 14. Check [http://tidesandcurrents.noaa.gov/hab/beach_conditions.html](http://tidesandcurrents.noaa.gov/hab/beach_conditions.html) for recent, local observations.

Analysis

There is currently no indication of *Karenia brevis* along the coast of Texas. For information on area shellfish restrictions, contact the Texas Department of State Health Services.

MODIS Aqua imagery from 7/6 (shown left) is obscured by clouds from the Bolivar Peninsula to Matagorda Peninsula regions, limiting analysis. Elevated to high chlorophyll (2-11 µg/L) is visible along- and offshore from the Matagorda Peninsula to Mustang Island. Elevated chlorophyll (2-4 µg/L) is visible along- and offshore from Padre Island National Seashore to the Rio Grande. The elevated chlorophyll is most likely not indicative of the presence of *K. brevis* and is probably due to the resuspension of benthic chlorophyll and sediments along the coast.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 30km north from the Port Aransas region from July 6 to July 10.

Davis, Kavanaugh

![Wind conditions from Port Aransas-Coast, TX](image)

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis

**Port Aransas:** South winds (5-15kn, 3-8m/s) today becoming southeast winds (10-15kn, 5-8m/s) this afternoon. South winds (10-20kn, 5-10m/s) tonight through Tuesday becoming southeast winds (10-15kn) Tuesday night through Friday.

Satellite chlorophyll image and forecast winds for July 8, 2014 06Z with points representing cell concentration sampling data from June 27 to July 3: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide: http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
