Conditions Report

There is currently no indication of *Karenia brevis* (commonly known as Texas red tide) along the coast of Texas. No respiratory irritation is expected Monday, July 14 through Monday, July 21. Check [http://tidesandcurrents.noaa.gov/hab/beach_conditions.html](http://tidesandcurrents.noaa.gov/hab/beach_conditions.html) for recent, local observations.

Analysis

There is currently no indication of *Karenia brevis* along the coast of Texas. For information on area shellfish restrictions, contact the Texas Department of State Health Services.

MODIS Aqua imagery from 7/13 (shown left) is obscured by clouds along- and offshore from the Sabine Pass to San Luis Pass regions, limiting analysis. Patches of elevated to high chlorophyll (2-17 µg/L) are visible along- and offshore from the San Luis Pass to Matagorda Island regions. The elevated chlorophyll is most likely not indicative of the presence of *K. brevis* and is probably due to the resuspension of benthic chlorophyll and sediments along the coast.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 30km north from the Port Aransas region from July 13-17.

Kavanaugh, Yang

Wind conditions from Port Aransas-Coast, TX

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis

**Port Aransas:** Southwest winds (5-10kn, 3-5m/s) today becoming south winds (5-15kn, 3-8m/s) this afternoon through Wednesday and increasing to 15-20kn (8-10m/s) Wednesday afternoon through Friday night.
Satellite chlorophyll image and forecast winds for July 15, 2014 06Z with points representing cell concentration sampling data from July 6 to 11: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
