Conditions Report

There is currently no indication of Karenia brevis (commonly known as Texas red tide) along the coast of Texas. No respiratory irritation is expected Monday, August 18 through Monday, August 25. Check http://tidesandcurrents.noaa.gov/hab/beach_conditions.html for recent, local observations.

Analysis

There is currently no indication of Karenia brevis along the coast of Texas. For information on area shellfish restrictions, contact the Texas Department of State Health Services.

Recent MODIS Aqua imagery (8/16, shown left) is partially obscured by clouds along- and offshore from Sabine Pass to north Matagorda Island, limiting analysis in this region. Elevated chlorophyll (2-6 µg/L) is visible stretching along- and offshore from Sabine Pass to Rio Grande. Elevated chlorophyll is most likely not indicative of the presence of K. brevis and is probably due to the resuspension of benthic chlorophyll and sediments along the coast.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 40km north from the Port Aransas region from August 16-21.

Yang, Schneider, Kavanaugh

Wind conditions from Port Aransas-Coast, TX

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis

Port Aransas: Southeast winds (10-20kn, 5-10m/s) today. South winds (15-20kn, 8-10m/s) Tuesday, becoming southeast (10-20kn) Tuesday afternoon through Friday.

Satellite chlorophyll image and forecast winds for August 19, 2014 06Z with points representing cell concentration sampling data from August 8 to 14: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:
http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
