Last bulletin: Tuesday, January 20, 2015

Conditions Report
Karenia brevis (commonly known as Texas red tide) ranges from not present to very low concentrations along the coast of Texas. No respiratory irritation is expected alongshore Texas Monday, January 26 through Monday, February 2.

Check http://tidesandcurrents.noaa.gov/hab/beach_conditions.html for recent, local observations.

Analysis
Sampling from Texas A&M University’s Imaging FlowCytobot, located on the Port Aransas ship channel, continues to indicate that Karenia brevis concentrations range between 'not present' and 'very low a' (TAMU; 1/20-26). For information on area shellfish restrictions, contact the Texas Department of State Health Services.

Recent MODIS Aqua imagery (1/23, shown left) is obscured by clouds from Sabine Pass to the Rio Grande preventing analysis in these regions. In MODIS Aqua imagery from January 20 (not shown), elevated chlorophyll (3-10 µg/L) is visible stretching along- and offshore the Texas coast from Sabine Pass to the Rio Grande. Patches of high chlorophyll (10-12 µg/L) are also visible along- and offshore from Sabine Pass to Pass Cavallo. Elevated chlorophyll is not necessarily indicative of the presence of K. brevis and is most likely due to the resuspension of benthic chlorophyll and sediments along the coast.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 20 km north from the Port Aransas region from January 23-29.

Keeney, Yang, Derner

Satellite chlorophyll image with possible K. brevis HAB areas shown by red polygon(s), when applicable. Points represent cell concentration sampling data from January 16 to 22: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:
http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Detailed sample information can be obtained through the Texas Parks and Wildlife Department at:

Wind Analysis

**Port Aransas:** North winds (5-10kn, 3-5m/s) today, shifting east in the afternoon. Southwest winds (5-10kn) tonight. West winds (5-10kn) Tuesday shifting southwest in the afternoon. South winds (5kn, 3m/s) Tuesday night. East winds (5kn) Wednesday becoming southeast in the afternoon through Wednesday night. South winds (5-10kn) Thursday becoming east (10-15kn, 5-8m/s) Thursday night. Northeast winds (10-15kn) Friday becoming east Friday night.
Satellite chlorophyll image and forecast winds for January 27, 2015 06Z with points representing cell concentration sampling data from January 16 to 22: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
