Conditions Report

*Karenia brevis* (commonly known as Florida red tide) ranges from not present to background concentrations along the coast of southwest Florida, and not present in the Florida Keys. No respiratory irritation is expected alongshore southwest Florida Monday, March 23 through Monday, March 30.

Check [http://tidesandcurrents.noaa.gov/hab/beach_conditions.html](http://tidesandcurrents.noaa.gov/hab/beach_conditions.html) for recent, local observations.

Analysis

Recent samples received from along- and offshore southwest Florida, from Pinellas to Monroe counties, including the Florida Keys, all indicate that *Karenia brevis* is not present, with the exception of two samples with background concentrations collected from Charlotte County (FWRI, SCHD, MML; 3/15-3/19).

In recent MODIS Aqua imagery (3/20, shown left), elevated chlorophyll (2-6 µg/L) is visible in patches along- and offshore southwest Florida from Pinellas to Collier counties.

Harmful algal bloom formation at the coast of southwest Florida is not expected today through Monday, March 30.

Kavanaugh, Davis, Lalime

Wind conditions from Venice Pier, FL

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis

**Englewood to Tarpon Springs (Venice):** Southwest winds (10-15kn, 5-8m/s) today. Northwest to north winds (5-10kn, 3-5m/s) tonight through Tuesday night becoming northeast winds after midnight. East winds (10kn, 5m/s) Wednesday becoming southwest winds (5kn, 3m/s) Wednesday afternoon. West winds (5kn) Wednesday night becoming south to southwest winds (5-10kn) after midnight through Friday.
Satellite chlorophyll image and forecast winds for March 24, 2015 06Z with points representing cell concentration sampling data from March 15 to 19: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide: http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
