

Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Southwest Florida

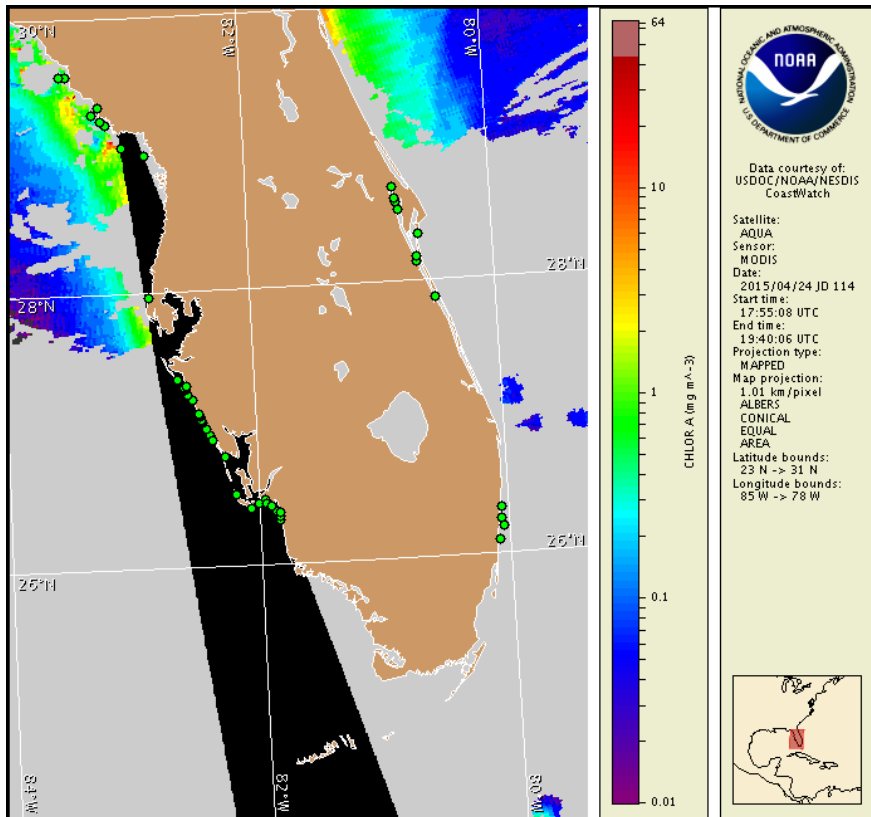

Monday, 27 April 2015

NOAA National Ocean Service

NOAA Satellite and Information Service

NOAA National Weather Service

Last bulletin: Monday, April 20, 2015

Satellite chlorophyll image with possible *K. brevis* HAB areas shown by red polygon(s), when applicable. Points represent cell concentration sampling data from April 17 to 23: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Detailed sample information can be obtained through FWC Fish and Wildlife Research Institute at:

<http://myfwc.com/redtidestatus>

Conditions Report

There is currently no indication of *Karenia brevis* (commonly known as Florida red tide) along the coast of southwest Florida, including the Florida Keys. No respiratory irritation is expected alongshore southwest Florida Monday, April 27 through Monday, May 4. Check http://tidesandcurrents.noaa.gov/hab/beach_conditions.html for recent, local observations.

Analysis

Recent samples received from along- and offshore southwest Florida, from Pinellas to Monroe counties, all indicate that *Karenia brevis* is not present (FWRI, SCHD, MML, CCPCPD; 4/17-4/23).

Recent MODIS Aqua imagery (4/24, shown left) has been obscured by clouds alongshore southwest Florida, preventing analysis.

Harmful algal bloom formation at the coast of southwest Florida is not expected today through Monday, May 4.

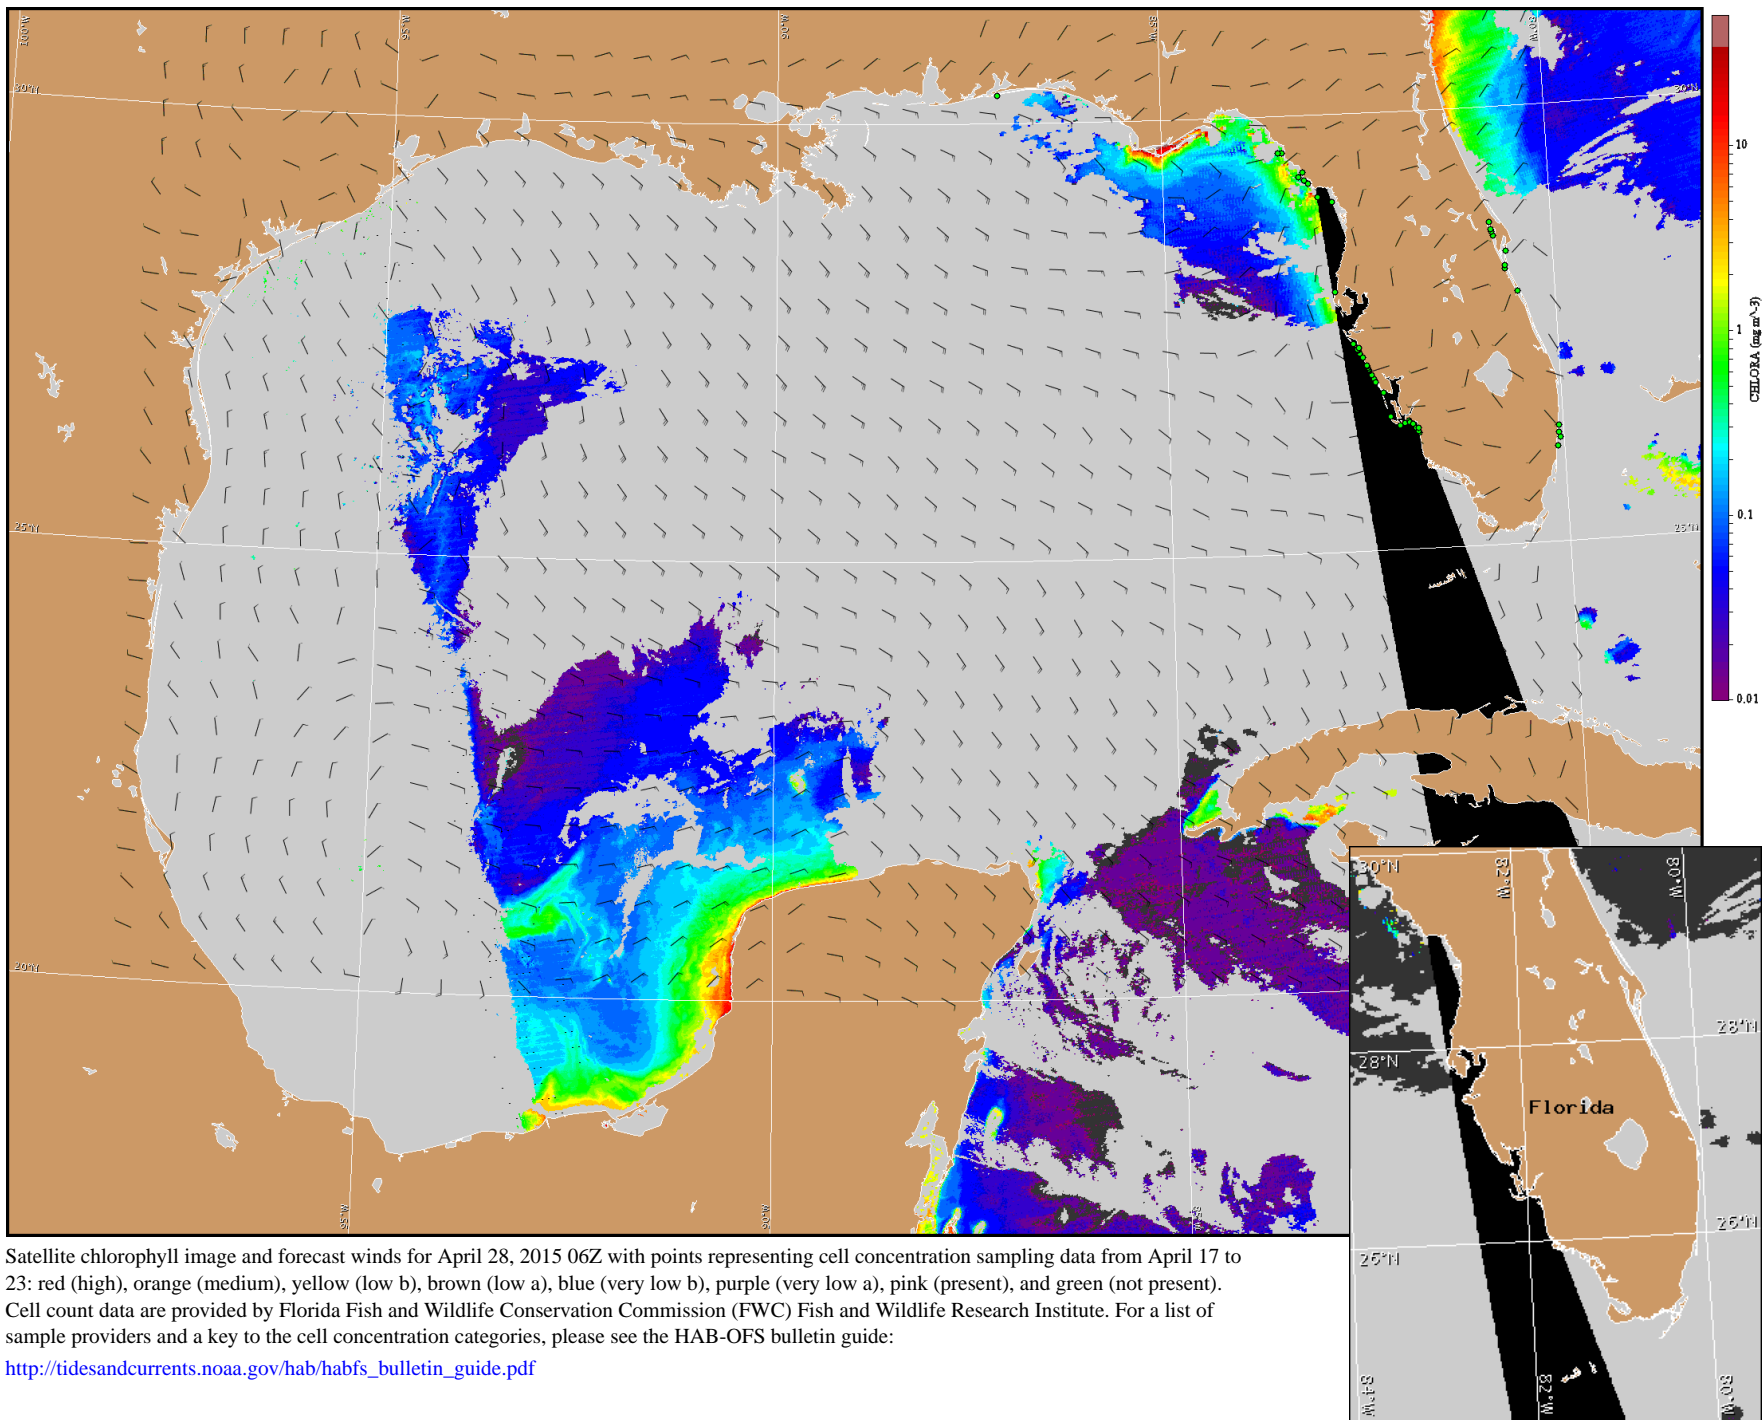

Davis, Yang

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

Wind Analysis

Englewood to Tarpon Springs (Venice): Northwest winds (5-15kn, 3-8m/s) today becoming west to southwest winds (5-10kn, 3-5m/s) tonight. Southeast to south winds (5-15kn) Tuesday. Southwest winds (10-15kn, 5-8m/s) Wednesday becoming west winds (20kn, 10m/s) Wednesday night and Thursday. Northwest winds (20kn) Thursday evening through Friday.

Satellite chlorophyll image and forecast winds for April 28, 2015 06Z with points representing cell concentration sampling data from April 17 to 23: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
