

# Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Southwest Florida

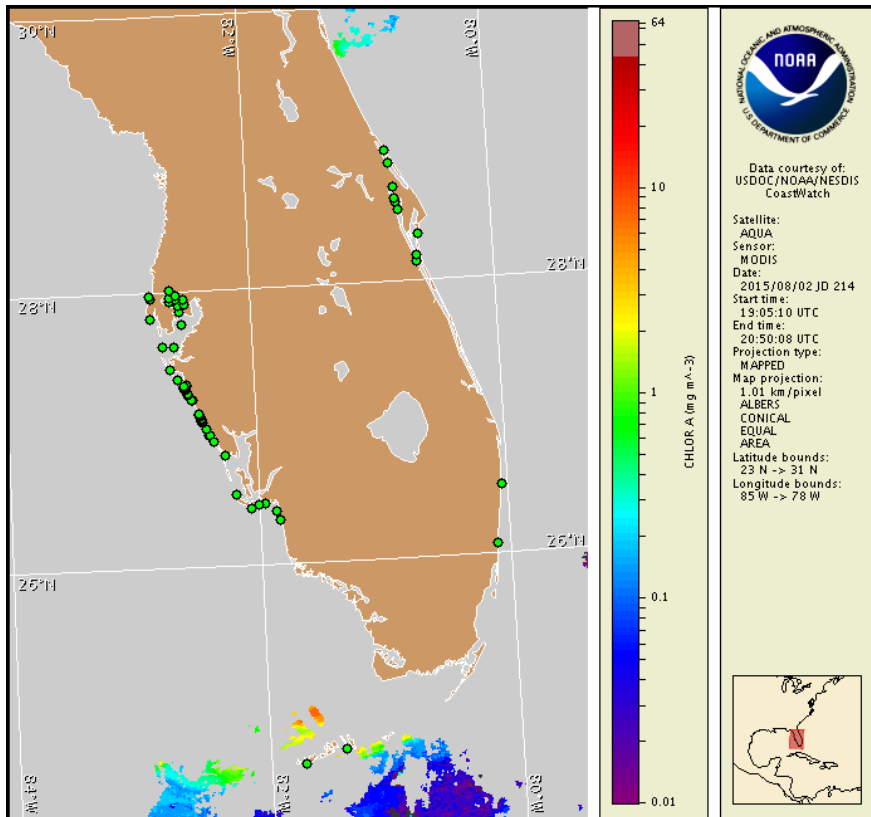

Monday, 03 August 2015

NOAA National Ocean Service

NOAA Satellite and Information Service

NOAA National Weather Service

Last bulletin: Monday, July 27, 2015

Satellite chlorophyll image with possible *K. brevis* HAB areas shown by red polygon(s), when applicable. Points represent cell concentration sampling data from July 24 to 30: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

[http://tidesandcurrents.noaa.gov/hab/habfs\\_bulletin\\_guide.pdf](http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf)

Detailed sample information can be obtained through FWC Fish and Wildlife Research Institute at:

## Conditions Report

There is currently no indication of *Karenia brevis* (commonly known as Florida red tide) along the coast of southwest Florida, including the Florida Keys. No respiratory irritation is expected alongshore southwest Florida Monday, August 3 through Monday, August 10. Check [http://tidesandcurrents.noaa.gov/hab/beach\\_conditions.html](http://tidesandcurrents.noaa.gov/hab/beach_conditions.html) for recent, local observations.

## Analysis

Samples collected over the past week along- and offshore the coast of southwest Florida from Pinellas to Monroe counties, including the Florida Keys, all indicate that *Karenia brevis* is not present (FWRI, MML, SCHD; 7/24-7/29).

Recent MODIS Aqua imagery (8/2, shown left) has been completely obscured by clouds along- and offshore southwest Florida from Pinellas to Monroe counties over the past week, preventing analysis.

Harmful algal bloom formation at the coast of southwest Florida is not expected today through Monday, August 10.

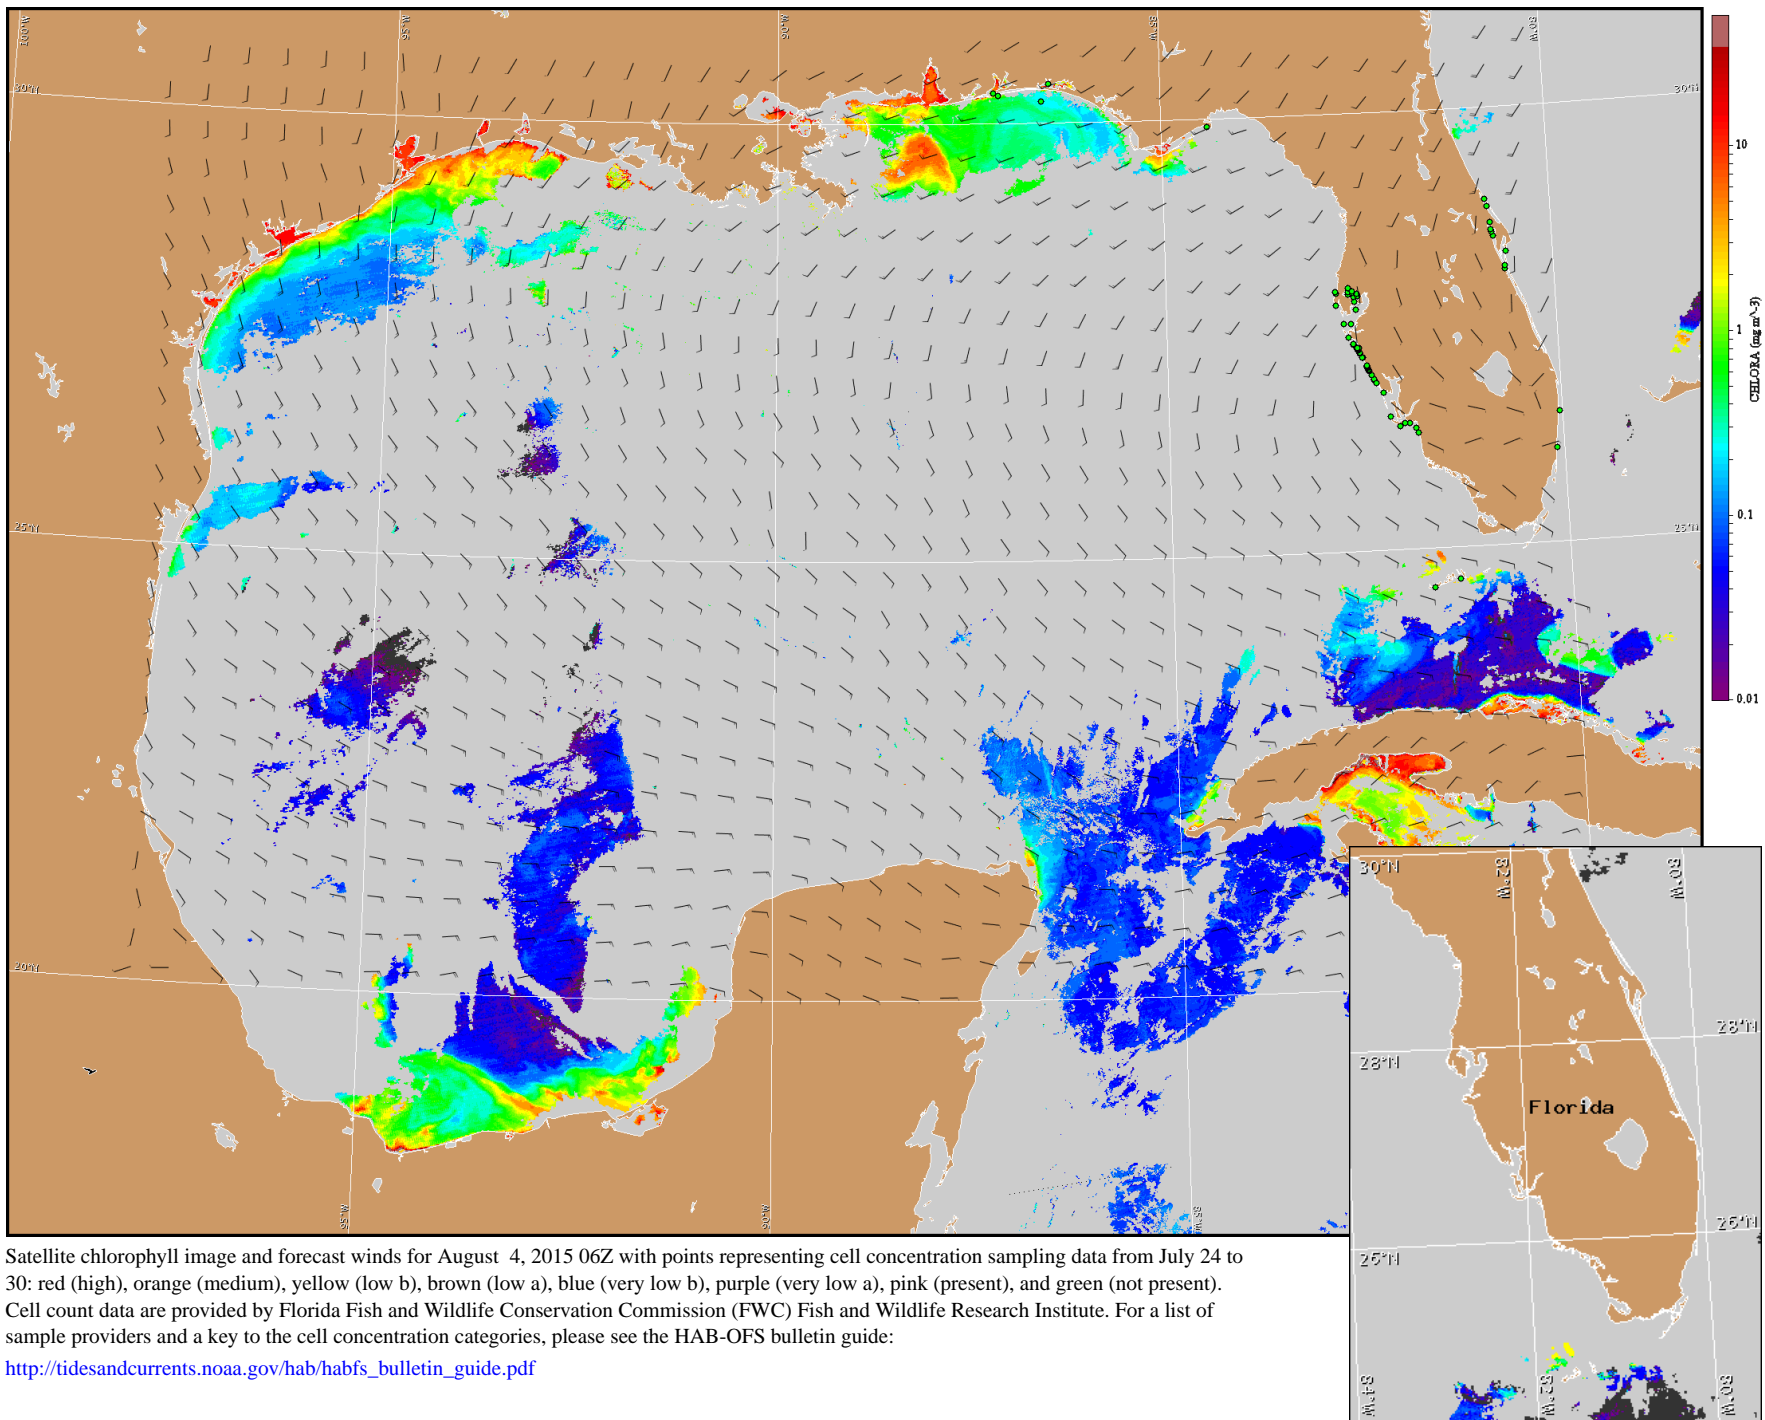

Davis, Yang

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

## Wind Analysis

**Englewood to Tarpon Springs (Venice):** West winds (10-20kn, 5-10m/s) today becoming southwest winds (10kn, 5m/s) tonight. South winds (5kn, 3m/s) Tuesday. West winds (5kn) Tuesday evening becoming north winds after midnight. East winds (5kn) Wednesday becoming southwest winds in the afternoon. Northwest winds (5kn) Wednesday night becoming northeast winds (5kn) after midnight. East winds (5kn) Thursday becoming southwest winds (5kn) in the afternoon. West winds (5kn) Thursday night becoming southwest winds after midnight. South winds (5kn) Friday becoming southwest winds (10kn) in the afternoon.

Satellite chlorophyll image and forecast winds for August 4, 2015 06Z with points representing cell concentration sampling data from July 24 to 30: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide: [http://tidesandcurrents.noaa.gov/hab/habfs\\_bulletin\\_guide.pdf](http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf)

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
