Gulf of Mexico Harmful Algal Bloom Bulletin
Region: Texas
Monday, 03 August 2015
NOAA National Ocean Service
NOAA Satellite and Information Service
NOAA National Weather Service
Last bulletin: Monday, July 27, 2015

Karenia brevis (commonly known as Texas red tide) ranges from not present to background concentrations along the coast of Texas. No respiratory irritation is expected Monday, August 3 through Monday, August 10.

Check http://tidesandcurrents.noaa.gov/hab/beach_conditions.html for recent, local observations.

Analysis
Sampling from the Texas A&M University’s Imaging FlowCytobot, located on the Port Aransas ship channel, indicates that Karenia brevis concentrations range between ‘not present’ and ‘background’ (TAMU; 7/27-8/3). For information on area shellfish restrictions, contact the Texas Department of State Health Services.

In recent MODIS Aqua imagery (8/2, shown left), patches of elevated chlorophyll (1-10 µg/L) are visible along- and offshore the Texas coast from Sabine Pass to the Padre Island National Seashore, with patches of high chlorophyll (10-13 µg/L) visible along- and offshore from Sabine Pass to Bolivar Roads Pass. Elevated chlorophyll is not indicative of the presence of K. brevis and is most likely due to the resuspension of benthic chlorophyll and sediments along the coast.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 15 km north from the Port Aransas region from August 2-6.

Keeney, Derner

Wind conditions from Port Aransas-Coast, TX

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis
Port Aransas: South to southeast winds (5-15kn, 3-8m/s) today. South winds (10-20kn, 5-10m/s) tonight through Friday
Satellite chlorophyll image and forecast winds for August 4, 2015 06Z with points representing cell concentration sampling data from July 24 to 30: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present).

Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
