Karenia brevis (commonly known as Texas red tide) ranges from not present to background concentrations along the coast of Texas. No respiratory irritation is expected Monday, December 28, 2015 through Monday, January 4, 2016.

Check http://tidesandcurrents.noaa.gov/hab/beach_conditions.html for recent, local observations.

Analysis
Sampling from the Texas A&M University’s Imaging FlowCytobot, located on the Port Aransas ship channel, indicates that Karenia brevis concentrations range between ‘not present’ and background (TAMU; 12/21-28). For information on area shellfish restrictions, contact the Texas Department of State Health Services.

Recent MODIS Aqua imagery (12/27, shown left) is completely obscured by clouds along- and offshore the Texas coast from Sabine Pass to the Rio Grande, preventing chlorophyll analysis.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 30 km south from the Port Aransas region from December 27 to 31.

Keeney, Derner

Wind conditions from Aransas Pass, TX

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis
Port Aransas to Baffin Bay: West winds (15-30kn, 8-15m/s) today. Northwest winds (10-15kn, 5-8m/s) tonight. Variable easterly winds (5-15kn, 3-8m/s) Tuesday. Northeast winds (15-20kn, 8-10m/s) Wednesday through Friday. North winds (20kn, 10m/s) Friday night.
Satellite chlorophyll image and forecast winds for December 29, 2015 06Z with points representing cell concentration sampling data from December 18 to 23: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:
http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
