Gulf of Mexico Harmful Algal Bloom Bulletin
Region: Southwest Florida
Monday, 20 June 2016
NOAA National Ocean Service
NOAA Satellite and Information Service
NOAA National Weather Service
Last bulletin: Monday, June 13, 2016

Conditions Report
There is currently no indication of *Karenia brevis* (commonly known as Florida red tide) along the coast of southwest Florida, including the Florida Keys. No respiratory irritation is expected Monday, June 20 through Monday, June 27.

Check [http://tidesandcurrents.noaa.gov/hab/beach_conditions.html](http://tidesandcurrents.noaa.gov/hab/beach_conditions.html) for recent, local observations.

Analysis
Samples collected over the past week along- and offshore the coast of southwest Florida from Pinellas to Monroe counties indicate that *Karenia brevis* is not present (FWRI, SCHD, MML; 6/10-6/16). Detailed sample information and a summary of impacts can be obtained through FWC Fish and Wildlife Research Institute at: [http://myfwc.com/redtidestatus](http://myfwc.com/redtidestatus).

In recent ensemble imagery (MODIS Aqua, 6/19), patches of elevated to high chlorophyll (1-13µg/L) with some of the optical characteristics of *K. brevis* are present along- and offshore Lee and Collier counties.

Harmful algal bloom formation at the coast of southwest Florida is not expected today through Monday, June 27.

Keeney, Davis

Wind conditions from Venice Pier, FL

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA’s National Weather Service (NWS).

Wind Analysis

**Englewood to Tarpon Springs (Venice):** East to northeast winds (5-20kn, 3-10m/s) today through Wednesday. Southeast winds (5kn, 3m/s) Thursday, shifting to northwest winds (5kn) Thursday night. North winds (5kn) Friday.
Satellite chlorophyll image and forecast winds for June 21, 2016 06Z with points representing cell concentration sampling data from June 10 to 16: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:
http://tidesandcurrents.noaa.gov/hab/hab_publication/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas with *K. brevis* optical characteristics shown in yellow (see p. 1 analysis for interpretation).
