Conditions Report

*Karenia brevis* (commonly known as Texas red tide) ranges from not present to high concentrations along the Texas coast in the Aransas Pass to Rio Grande regions. *K. brevis* concentrations are patchy in nature and levels of respiratory irritation will vary locally based upon nearby bloom concentrations, ocean currents, and wind speed and direction. The highest level of potential respiratory irritation forecast for Monday, October 17 to Thursday, October 20 is listed below:

**County Region:** Forecast (Duration)

- **Bay region-Corpus Christi Bay:** Moderate (M-Th)
- **Bay region-Upper Laguna Madre:** Low (M-Th)
- **Aransas Pass to PINS:** Low (M-Th)
- **Padre Island National Seashore region:** Moderate (M-Th)
- **Mansfield Pass to Beach Access 6 region:** Very Low (M), Moderate (Tu-Th)
- **Beach Access 6 to Rio Grande region:** Very Low (M), Moderate (Tu-Th)
- **Bay region-Lower Laguna Madre to Laguna Vista:** Low (M-Th)
- **All Other Texas Regions:** None expected (M-Th)

Check [http://tidesandcurrents.noaa.gov/hab/beach_conditions.html](http://tidesandcurrents.noaa.gov/hab/beach_conditions.html) for recent, local observations. Over the past few days, reports of respiratory irritation have been received from the Corpus Christi Bay region.

**Analysis**

*Karenia brevis* concentrations range between ‘not present’ and ‘high’ along the Texas coast from Aransas Pass to the Rio Grande, with the highest concentrations in Corpus Christi Bay (TPWD; 10/7-10/12). In the Upper Laguna Madre, samples collected indicate up to ‘low’ concentrations of *K. brevis*, with the highest concentrations identified at Bird Island Basin (TPWD; 10/13). In the Aransas Pass to Padre Island National Seashore (PINS) region, sampling from the Texas A&M University’s Imaging FlowCytobot, located on the Port Aransas ship channel, indicates ‘not present’ to ‘low at’ *K. brevis* concentrations (TAMU; 10/13-17). In the Beach Access 6 to Rio Grande region, ‘not present’ to ‘background’ concentrations of *K. brevis* were identified indicating a continued decrease (Texas Red Tide Rangers; 10/15). Detailed sample information and a summary of impacts can be obtained through Texas Parks and Wildlife Department at: [http://www.tpwd.state.tx.us/landwater/water/environconcerns/hab/redtide/status.phtml](http://www.tpwd.state.tx.us/landwater/water/environconcerns/hab/redtide/status.phtml).

For information on area shellfish restrictions, contact the Texas Department of State Health Services.

Recent MODIS Aqua imagery (10/15; shown left) is partially obscured by clouds along- and offshore from Sabine Pass to the Galveston Island region, limiting analysis. Elevated to very high chlorophyll (2 to >20 µg/L) is visible along- and offshore from Sabine Pass to the Matagorda Peninsula region, but elevated chlorophyll in this region is not necessarily indicative of the presence of *K. brevis* and may be due to the resuspension of benthic chlorophyll and sediments along the coast. Patches of elevated to high chlorophyll (2-16 µg/L) are visible along- and offshore from the Matagorda Island region to approximately PINS Mile Marker #19, offshore from approximately PINS Mile Marker #19 to the Rio Grande, and along- and offshore from the Rio Grande to approximately 380 km south. Continued sampling in these areas is recommended.
Forecast models based on predicted near-surface currents indicate a maximum transport of 30 km south from the Port Aransas region, 15 km north from PINS Mile Marker #15, and 80 km north from Brazos Santiago Pass from October 15-20.

Kavanaugh, Davis

Wind Analysis

**Baffin Bay to Port Aransas**: South to southeast winds (5-15kn, 3-8m/s) today through Wednesday night. East winds (5-10kn, 3-5m/s) Thursday becoming northeast (10-15kn, 5-8m/s) Thursday afternoon. North winds (15-25kn, 8-13m/s) Thursday night.

**Port Mansfield to Rio Grande**: Southeast to south winds (7-15kn, 4-8m/s) today through Wednesday night. Northeast winds (8-13kn, 4-7m/s) Thursday. North winds (18-23kn, 9-12m/s) Thursday night.
Satellite chlorophyll image and forecast winds for October 18, 2016 12Z with points representing cell concentration sampling data from October 7 to 14: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/hab_publication/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
