**Conditions Report**

*Karenia brevis* (commonly known as Texas red tide) ranges from not present to low concentrations along the coast of Texas. No respiratory irritation is expected alongshore Texas Monday, November 21 through Monday, November 28.

Check [http://tidesandcurrents.noaa.gov/hab/beach_conditions.html](http://tidesandcurrents.noaa.gov/hab/beach_conditions.html) for recent, local observations.

**Analysis**

Sampling from the Texas A&M University’s Imaging FlowCytobot (IFCB), located on the Port Aransas ship channel, indicates that *Karenia sp.* concentrations range between ‘background’ and ‘low a’ (TAMU; 11/14-11/21). The IFCB concentrations include *Karenia brevis* cells as well as *K. mikimotoi* and *K. papilionacea*. For information on area shellfish restrictions, contact the Texas Department of State Health Services.

In recent ensemble imagery (MODIS Aqua, 11/20; shown left) elevated to high chlorophyll (2-17 µg/L) is visible along- and off-shore from Sabine Pass to south of the Rio Grande. Elevated chlorophyll is not indicative of the presence of *K. brevis* and is most likely due to the resuspension of benthic chlorophyll and sediments along the coast.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 10km south from the Port Aransas region from November 20-24.

**Kavanaugh, Lalime**

**Wind Analysis**

*Port Aransas to Matagorda Ship Channel*: Southeast to south winds (5-20kn, 3-10m/s) today through Tuesday night. West winds (5-10kn, 3-5m/s) Wednesday shifting north in the afternoon. Northeast winds (5-10kn) Wednesday night. East to southeast winds (5-10kn) Thursday through Thursday night. Northeast winds (5-15kn, 3-8m/s) Friday through Friday night.

Satellite chlorophyll image and forecast winds for November 22, 2016 06Z with points representing cell concentration sampling data from November 11 to 18: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/hab_publication/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas with *K. brevis* optical characteristics shown in yellow (see p. 1 analysis for interpretation).
