Conditions Report

*Karenia brevis* (commonly known as Texas red tide) ranges from not present to background concentrations along the coast of Texas. No respiratory irritation is expected Monday, June 12 through Monday, June 19.

Check [https://tidesandcurrents.noaa.gov/hab/beach_conditions.html](https://tidesandcurrents.noaa.gov/hab/beach_conditions.html) for recent, local observations.

Analysis

Sampling from Texas A&M University’s Imaging FlowCytobot (IFCB), located on the Port Aransas ship channel, indicates that *Karenia brevis* concentrations range between ‘not present’ and ‘background’ (TAMU; 6/5-6/12). For information on area shellfish restrictions, contact the Texas Department of State Health Services.

Recent MODIS Aqua ensemble imagery (6/11; shown left) is partially obscured by clouds along the Texas coast, limiting analysis. Elevated to very high chlorophyll (2 to >20µg/L) with the optical characteristics of *K. brevis* is visible alongshore from the Galveston Island to the Matagorda Peninsula region and alongshore San Jose Island. However, elevated chlorophyll is not indicative of the presence of *K. brevis* and is most likely due to the resuspension of benthic chlorophyll and sediments along the coast.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 20km south from the Port Aransas region from June 11 to 15.

Davis, Urizar

```
Wind conditions from Port Aransas-Coast, TX
```

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

Wind Analysis

**Port Aransas to Matagorda Ship Channel:** Southeast to south winds (10-20kn, 5-10m/s) today through Friday.
Satellite chlorophyll image and forecast winds for June 13, 2017 06Z with points representing cell concentration sampling data from June 2 to 9: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:
http://tidesandcurrents.noaa.gov/hab/hab_publication/habfs_bulletin_guide.pdf

Verified and suspected HAB areas shown in red. Other areas with K. brevis optical characteristics shown in yellow (see p. 1 analysis for interpretation).
