Conditions Report

*Karenia brevis* (commonly known as Florida red tide) ranges from not present to very low concentrations along the coast of southwest Florida, and is not present in the Florida Keys. No respiratory irritation is expected alongshore southwest Florida Monday, June 26 through Monday, July 3. For recent, local observations and data check Mote Marine Laboratorys Daily Beach Conditions (http://visitbeaches.org/) and the Florida Fish and Wildlife Conservation Commission Red Tide Status (http://myfwc.com/redtidestatus).

Analysis

Recent samples collected along- and offshore the coast of southwest Florida from Manatee to Lee County identified not present to 'very low a' concentrations of *Karenia brevis* (FWRI, MML, SCHD, CCPCD; 6/16-6/23). Detailed sample information and a summary of impacts can be obtained through FWC Fish and Wildlife Research Institute at: http://myfwc.com/redtidestatus.

Recent ensemble imagery (MODIS Aqua, 6/25) is partially obscured by clouds along-shore Manatee and Sarasota counties, limiting analysis. Patches of elevated to very high chlorophyll (2 to >20 µg/L) with the optical characteristics of *K. brevis* are visible along-shore southwest Florida from southern Sarasota to Collier counties, and are likely the result of mixed non-harmful algal blooms that continue to be reported in the region.

Harmful algal bloom formation at the coast of southwest Florida is not expected today through Monday, July 3.

Davis, Ludema

Wind Analysis

**Englewood to Tarpon Springs (Venice):** Variable winds (5-10kn, 3-5m/s) today. Northwest to northeast winds (5-10kn) Tuesday and Wednesday. East winds (10kn, 5m/s) Thursday. Southeast winds (10kn) Friday.

Satellite chlorophyll image with possible *K. brevis* HAB areas shown by red polygon(s), when applicable. Points represent cell concentration sampling data from June 16 to 23: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

Detailed sample information can be obtained through FWC Fish and Wildlife Research Institute at:
