Lake Erie Harmful Algal Bloom Bulletin
03 September, 2019, Bulletin 19

Analysis
The *Microcystis* cyanobacteria bloom continues in the western basin of Lake Erie. Recent satellite imagery (9/2) shows the bloom extending from Maumee Bay north along the Michigan coast, to Brest Bay; east along the Ohio coast to the Marblehead Peninsula, offshore through the Bass Islands, and up to 10 miles east of Pelee Island. Observed conditions (8/27-9/2) promoted mixing and eastern transport of surface bloom concentration, now present in the central basin. Measured toxin concentrations are below recreational thresholds throughout most of the bloom extent. *Keep pets and yourself out of the water in areas where scum is forming.* The persistent cyanobacteria bloom in Sandusky Bay continues. No other blooms are present in Lake Erie.

Forecasts
Winds (9-26 kn) forecast today through Thursday (9/2-5) will promote mixing and eastern transport of surface *Microcystis* concentrations along the Michigan coast. -Keeney, Jima
